Montana Medicaid Inpatient Pricing Calculator

July 1, 2015

This DRG Pricing Calculator is intended to enable hospitals and other interested parties in understanding and predicting payment for inpatient stays covered by Montana Medicaid. This version applies to stays with dates of admission on or after July 1, 2015. The "Calculator" sheet incorporates the pricing logic for the DRG base payment, cost outlier payments, etc. The "DRG Table" sheet shows information specific to each DRG.

Under DRG payment, the Medicaid claims processing system assigns each complete inpatient stay to an All Patient Refined Diagnosis Related Group (APR-DRG) based on the diagnoses and procedures on the claim. (Note that Montana Medicaid does not use Medicare DRGs.) Hospitals need not put the DRG on the claim and need not purchase APR-DRG software. The ”Calculator” sheet assumes the user knows which APR-DRG applies to a particular stay. For more information on APR-DRGs, contact 3M Health Information Systems, which developed the software and owns it.

This calculator spreadsheet is intended to be helpful to users, but it cannot capture all the editing and pricing complexity of the Medicaid claims processing system. In cases of difference, the claims processing system is correct.

A "Frequently Asked Questions" document is available and is essential in understanding the payment method. This DRG Pricing Calculator is also available in spreadsheet form as an interactive Excel file. To download either document, go to http://medicaidprovider.mt.gov/01#186032775-fee-schedule--apr-drg. Montana Medicaid DRG Table
Effective July 1, 2015

Notes:
1. The Gross DRG Amount (i.e., DRG base payment) equals the payment relative weight times the base price.
2. The DRG base price is $5,279, except for centers of excellence it is $7,360.
3. For the convenience of readers, the spreadsheet shows the Gross DRG Amount for each stay when the base price is $5,279.
4. For pediatric mental health patients (< 18 years old) the Gross DRG Amount is increased by an age adjustor of 1.50. See Column I.
5. For normal newborns the Gross DRG Amount is increased by a policy adjustor of 1.40. See Columns F and J.
6. For neonates (i.e., sick newborns), the Gross DRG Amount is increased by a policy adjustor of 1.40. See Columns F and J.
7. ALOS figures refer to the nationwide average length of stay for each DRG. This information is used to adjust payments for acute care transfer cases and cases where the beneficiary has Medicaid eligibility for less than
8. "FY 2014 Montana Volume" refers to the count of Montana Medicaid stays by APR-DRG. It is included for the information of hospitals and other interested parties.
9. Relative weights were derived from 3M V.32 HSRV weights (Col D) re-centered so that that total average casemix for MT stays = 1.05 (Col E).
10. This table shows information for 1,258 DRGs (314 base DRGs, each with four levels of severity, plus two error DRGs).

Cost-to-Charge Ratios

CCRs are multiplied by covered charges to calculate the hospital's estimated cost of care for each stay. The estimated cost of care is a factor in the cost outlier calculations. For Montana hospitals, the CCR is specific to the hospital and calculated by DPHHS from the cost report. For centers of excellence, a hospital-specific CCR is also used. For other out-of-state hospitals, DPHHS uses statewide average CCRs as calculated by Medicare (urban operating plus capital).
